

TEMESGEN MEHARIE

Full Stack Developer

Addis Ababa, Ethiopia | +251 985 250 001 | temesgenmeharie71@gmail.com | github.com/temesgenmeharie

PROFESSIONAL SUMMARY

Full Stack Developer with 2 years of experience building and deploying production-grade web applications using JavaScript/TypeScript, React, and Node.js. Comfortable architecting multi-file, multi-service codebases, setting up reproducible environments with Docker, and producing clear technical documentation — both independently and within cross-functional engineering teams.

TECHNICAL SKILLS

- Languages:** JavaScript, TypeScript
- Frontend:** React.js, HTML5, Tailwind CSS/CSS3, Vite, Zustand, TanStack Query, React Hook Form, ShadCN UI
- Backend:** Node.js, Express.js, NestJS, RESTful API design, Prisma (ORM)
- Databases:** PostgreSQL, MySQL, Redis, SQL
- DevOps & Tools:** Docker, Docker Compose, Nginx, MinIO (S3-compatible storage), Git/GitHub, Linux, Windows
- Practices:** Multi-file project architecture, Domain-Driven Design (DDD), technical documentation, debugging & testing, Agile teamwork

PROFESSIONAL EXPERIENCE

Software Developer | INSA (Information Network Security Administration) 2024 – Present

- Collaborate within a cross-functional engineering team to design and build full-stack applications, working across multi-file, multi-service codebases in realistic production-style environments.
- Independently designed, built, and deployed an IT Asset Inventory Management System end-to-end — covering database schema design, backend APIs, and a React front end.
- Contributed to architecture and containerization decisions using Docker, ensuring consistent, reproducible development and deployment environments across the team.
- Wrote and maintained clear technical documentation to support onboarding, testing, and long-term maintainability of team projects.
- Used Git for version control and collaborative development workflows across multiple contributors.

KEY PROJECTS

Pharmacy Inventory Management System (PIMS) | Individual Project

- Architected and independently built an enterprise-grade, multi-branch pharmacy platform (React, TypeScript, NestJS, PostgreSQL, Prisma) spanning procurement, branch transfers, inventory tracking, and point-of-sale, applying Domain-Driven Design principles.
- Designed a relational schema with data isolation and built scalable NestJS REST APIs enforcing strict Role-Based Access Control across role-tailored dashboards for Cashier, Manager, and Auditor users.
- Engineered an immutable, ledger-based inventory engine with strict FEFO (First-Expired, First-Out) enforcement, background expiry monitoring, and a multi-step procurement state machine from purchase order to goods receipt.
- Set up production-grade Dockerized infrastructure (Nginx, Redis/BullMQ, MinIO) with zero-downtime deployment workflows and continuous Point-in-Time Recovery (PITR) database backups.

Digital Forensic Case Management System | Team Project

- Built a full-stack case management platform (React, Node.js, Express, PostgreSQL) enabling structured tracking of digital forensic cases.
- Containerized the application with Docker to standardize the development environment and ensure reproducible deployments across the team.
- Worked across multiple modules/services within the codebase, coordinating with teammates on architecture and integration.

IT Asset Inventory Management System | Individual Project

- Designed and independently developed a full-stack inventory system (React, Node.js/Express, PostgreSQL/MySQL) to track and manage IT assets.
- Handled the complete lifecycle — architecture, database design, API development, front-end build, and deployment.

EDUCATION

BSc in Computer Science | Arba Minch University 2021 – 2024

CERTIFICATIONS

- Fundamental Programming — Udacity
- Dereja Academy Accelerator Program (DAAP)

LANGUAGES

English: Proficient | Amharic: Native
